

GitHub Image Upload Cheat Sheet

GitHub Image Upload Cheat Sheet

Step 1: Organize Your Images

- On your phone, group your pictures into a single album/folder.
- Move them to your computer using cable, AirDrop, or cloud transfer.

Step 2: Create a ZIP File

- On your computer, right-click the folder and choose "Compress" (Mac) or "Send to > Compressed (zipped) folder" (Windows).
- This will create a .zip file containing all your images.

Step 3: Upload to GitHub

- Go to your GitHub repository.
- Click "Add file" > "Upload files".
- Drag and drop the .zip file into GitHub.
- Commit your upload.

Optional: Unzip and Push

- Unzip the folder on your computer if you prefer images loose.
- Use GitHub Desktop or CLI to push all images inside a directory (example: /images/).

Quick Tips:

- GitHub organizes folders automatically based on file paths.
- Keep image filenames simple and clear (example: dad-radio.jpg, mom-jewelry01.jpg).
- Use folders like /images/mom/ and /images/dad/ for better organization.

Done! Now your images are safe and organized on GitHub!
